

Did you know?

1 The frogs find Cat inside a chrysalis. Butterflies start life as tiny eggs and hatch as caterpillars. Their main job is to eat! Next comes the chrysalis, which might look like a little bag with nothing going on. But inside, the caterpillar is changing. When they come out, they are grownup butterflies.

2 Cat is an eastern swallowtail butterfly, which is very common in the United States.

3 Not all swallowtails look like Cat. There are more than 550 kinds, with lots of colors.

4 Butterflies are important! Butterflies, bees, moths, birds, and bats are pollinators, which means that they help plants reproduce.

5 Little Frog is a green tree frog. Real ones aren't as brave as Little Frog. They're easily scared. Tree frogs live where they can find lots of plants near water. They like ponds or swamps. They eat things like flies, roaches, and ants. Yum.

Think about it

Have you ever hurt someone's feelings? What could you have done differently?

Do you notice when someone feels left out? How can you help others feel included?

Little Frog felt left out, so he told a big lie to get attention. Then the lie made him feel even worse. Do you think Little Frog learned his lesson? How would you feel if a friend lied to you?

Cat has a gift for helping others. Everyone has talents they can share. What are you good at doing? Can you think of ways to be a helper?
